

# The Winter Cache Project

The mission of the Winter Cache Project (WCP) is to free ourselves from a dependence on industrial agriculture and to increase our community food security by developing sustainable local food systems. By growing and storing our own food to last throughout the winter and educating ourselves about agricultural issues, we aim to create a working

I have the honor of designing the template for this project. This project provides a real gift to the community it supports. Community Gardening Projects bring neighbors together and empowers people to supplement their food supply by growing it themselves.

Community gardening stimulates social interaction, encourages self-reliance, truly beautifies neighborhoods and produces nutritious foods, while reducing family food budgets. Each garden is an autonomous neighborhood-based effort where friends share work and responsibility. food, and a connection to the earth and each other. example of how we can come together as a community to provide for our basic needs by employing the principles of mutual aid, equal access, and self-determination.
